

# Mt. Erskine

## ... can be preserved forever.

The Salt Spring Island Conservancy is coordinating a fundraising effort to buy 100 acres of land on Mt. Erskine. The property includes the summit, which at 448 metres is the highest point on north Salt Spring.

The Mt. Erskine land contains spectacular arbutus and coastal Douglas-fir forest (which B.C.'s Conservation Data Centre classifies as an "ecosystem at risk") along the edge of a dramatic cliff. The property also contains some wetland and provides Salt Spring's largest habitat for hairy manzanita, a beautiful shrub and part of a rare plant community in B.C. A portion of Maxwell Creek runs through the southwest corner of the property.

When combined with adjacent, already-protected properties (see map), this land will contribute to the permanent protection of a large, contiguous undeveloped area of up to 240 ha (600 acres). Rare and endangered habitat will also be preserved. Mt. Erskine forms the northern part of a corridor of protected land on Salt Spring, stretching all the way from Mt. Tuam in the south, including Hope Hill, Mt. Bruce, Mt. Sullivan, Burgoyne Bay, and Mt. Maxwell. Many of these areas are open to the public.

This privately owned property includes a vital portion of the trail network from Collins Road to Toynbee Road (see map), and provides spectacular

views over Stuart Channel and

Vancouver Island from the peak's summit and western ridge. The purchase of this 100-acre property will secure this popular trail, now and for future generations.

While government agencies and other organizations may contribute to the purchase of this land, most of the total purchase cost of \$650,000 must come from the Salt Spring community.

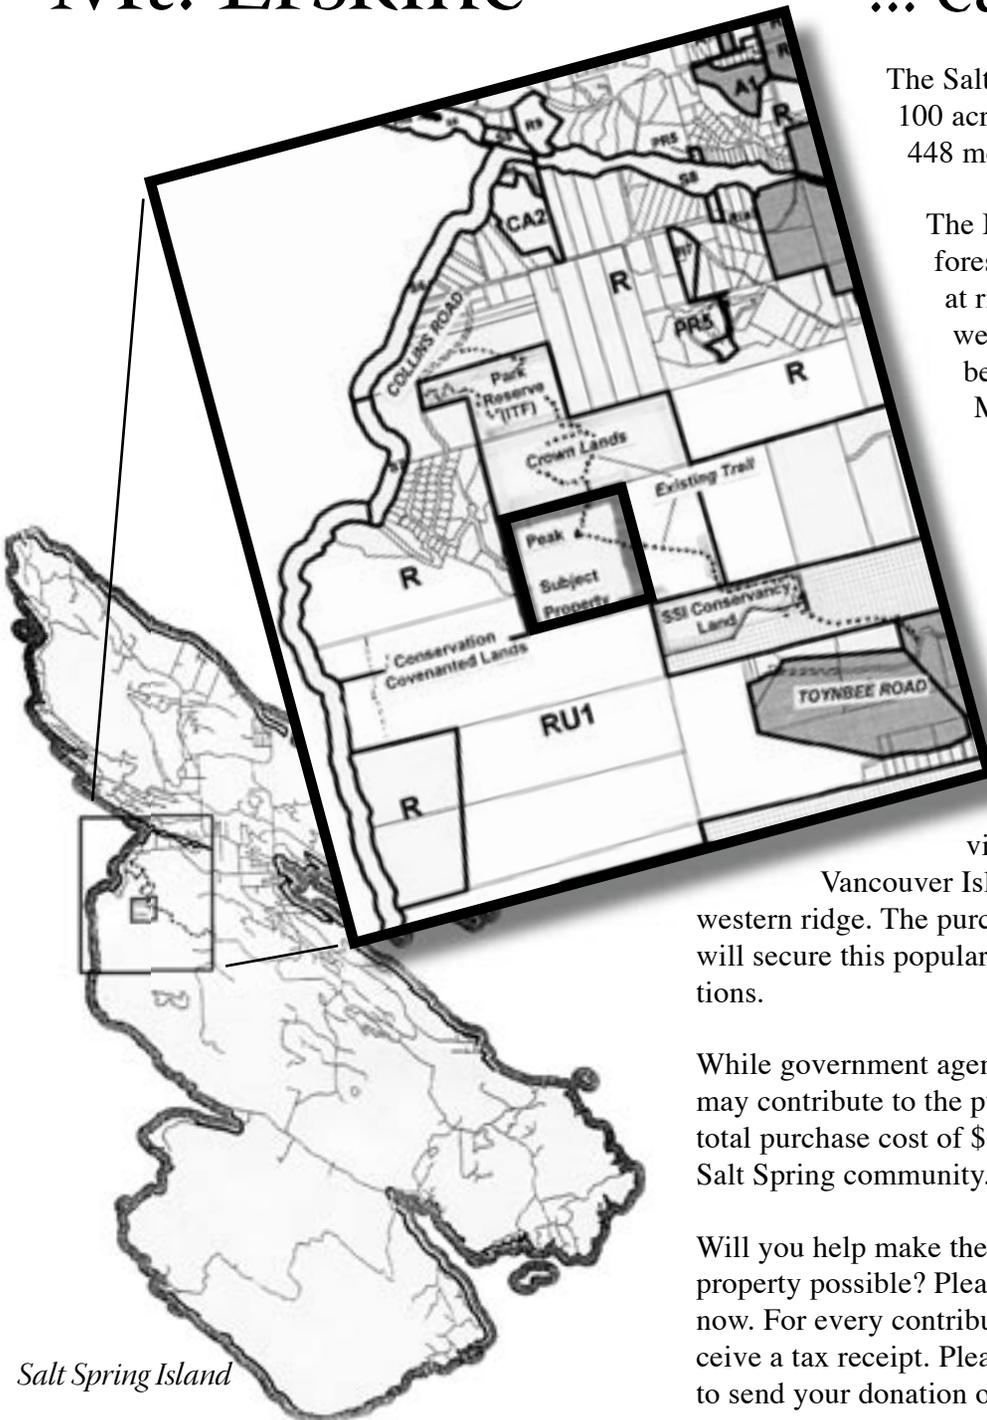

Will you help make the preservation of the Mt. Erskine property possible? Please make a donation or pledge now. For every contribution of \$20 or more, you will receive a tax receipt. Please use the form on this brochure to send your donation or pledge to the Conservancy.
